

From Data to Decisions, Instantly. with Genea AI

AI-powered reporting that helps teams get insights faster.

Security teams collect large volumes of access and activity data, but extracting insights often requires manual reports or specialized skills.

Genea AI enables natural language reporting directly in the platform, so teams can quickly generate analytics and insights without external tools.

Feature Highlights

Turn prompts into insights

Use natural language to generate analytics, charts, and reports without manual report building or technical expertise.

Surface trends and patterns across access activity

Analyze occupancy, space usage, credentials, and access events together to quickly spot anomalies and meaningful trends.

Save time on investigations and everyday reporting

Quickly surface insights that previously required multiple steps, exports, or custom reports.

Export insights for deeper analysis when needed

Download results as CSV files to support extended analysis, audits, or external reporting workflows.
