

# Genea Security + Ambient.ai

**More impact, greater insight, less noise.**

Genea and Ambient.ai help enterprise security teams get more value from their existing systems by combining real-time access intelligence with AI-driven video analytics.

Genea provides Ambient.ai with real-time access control event data, where they are correlated with video context to automatically verify alarms, reduce unnecessary noise, and accelerate investigations. The result is clearer decision-making, faster response to real threats, and security teams that can operate more efficiently—without changing how access control is managed.

## Feature Highlights

## Real-Time Access & Alarm Events

Immediate visibility to access and door-alarm events (door forced open, denied access, etc.) so potential threats are detected as soon as they occur.

## Contextual Alarm Verification

AI-powered video context is correlated with access events to confirm real incidents and reduce false alarms, ensuring only meaningful alerts require attention.

## AI-Driven Alarm Prioritization

Automatically elevate critical access-related incidents and deprioritize low-risk or benign events, helping teams focus on what matters most.

## Per-Location Control & Monitoring

Roll out and manage the integration site-by-site while maintaining reliable event flow across all locations.
