

The Genea + ASSA ABLOY Integration

Extend Genea cloud-based access control to ASSA ABLOY wireless and IP locks. No new wiring, no proprietary hardware.

Every door on mechanical keys is a blind spot. No audit trail, no remote revocation, no lockdown. Genea and ASSA ABLOY bring those doors into the fold: wireless and IP locks under the same cloud-managed policies, visibility, and control as the rest of your facility.

Intuitive Features

Close the gaps without construction

Wi-Fi and PoE locks use your existing network to bring unmonitored doors under access control. No wiring required.

One dashboard for everything

Manage ASSA ABLOY locks alongside every other door in Genea. Schedules, hardware status, and event logs, no separate system to learn.

Built on open hardware

Aperio locks connect through non-proprietary Mercury controllers, so your investment isn't locked to any single vendor, including Genea.

1

Connect

Aperio hubs pair with Mercury controllers; IN-series locks join over PoE or Wi-Fi.

2

Configure

Assign locks to doors in the Genea dashboard and apply existing access groups and schedules.

3

Manage

Onboard, offboard, and audit from anywhere — changes sync to the locks automatically.
