

Genea Security + Atrium Campus Integration

Simplify Campus Access with Automated Provisioning and Unified Management.

Modern campuses thrive with connected systems. Yet managing thousands of student, faculty, and visitor credentials can quickly become complex and time-consuming.

By connecting Atrium with Genea's cloud-native access control platform, universities can eliminate manual credential work, ensure data accuracy, and gain complete visibility across every building on campus. The Genea Security + Atrium integration also provides streamlines access management—making campus operations more efficient, secure, and easier to manage at scale.

Built with You in Mind - The Genea + Atrium Advantage

Automated Provisioning

As cardholder data changes in Atrium, Genea automatically provisions, updates, or revokes access — ensuring the right people have the right access. Save up to 90% of the time typically spent on manual user management and reduce costly administrative overhead.

Flexibility that Fits your Future

Genea's open, API-based platform works with the technology you already use, including Atrium's mobile credentials, student information systems, and more. Avoid vendor lock-in and stay free to choose systems that best support your evolving campus operations.

Cloud-Native Reliability

Legacy access systems rely on on-site servers and constant maintenance. Genea's cloud-native platform removes that burden — no patches to install, no downtime to plan for. Just a more reliable, scalable way to keep every building secure while reducing IT workload and costs.

Intuitive Administration

An intuitive user interface provides full visibility and control to manage doors, users, and logs in one place. Dynamic, role-based access and granular permissions ensure the right access automatically, no manual adjustments required.

Unmatched Service, 24/7/365

From day one, Genea delivers white-glove onboarding with expert implementation guidance, tailored configuration and training. Once live, you're backed by 24/7/365 support from our Genea experts.
