

Genea Security + Raptor Technologies Emergency Management

Unified alerts. Smarter lockdowns. Safer schools.

Schools need safety solutions that move as fast as the threats they face. Disconnected systems can slow response and create confusion. Together, Genea Security and Raptor Alert combine real-time emergency alerts with access control actions to deliver instant lockdowns, coordinated response, and clear communication for staff and students within seconds.

Feature Highlights

-  Alerts triggered in Raptor or Genea automatically sync for connected security operations.
-  Initiate automated lockdowns, alerts, and other emergency response protocols from a single system.
-  Align emergency procedures across both systems so the right response is automatically activated for each incident type.
-  Unified event logging captures every alert, action, and response for reporting and compliance.
-  Scales from single schools to entire districts without added complexity.
