

The Genea + Singlewire Integration

From Security Event to Everyone Notified. In real time.

In an emergency, every manual step costs time. Someone sees the event, picks up a radio, makes the call, and hopes the message spreads. Genea and Singlewire remove those steps. Access control events trigger InformaCast mass notifications the moment they happen, and InformaCast alerts can activate Genea Emergency Plans, closing the loop between detection, communication, and lockdown.

Intuitive Features

Respond in seconds, not minutes. Genea events initiate InformaCast notifications automatically. No human relay between detection and alert.

Lock down without lifting a finger. InformaCast can activate Genea Emergency Plans across your locations, turning one alert into coordinated action.

Reach everyone, everywhere. InformaCast delivers to the devices people already use: phones, speakers, signage, desktops, and mobile.

Nothing new to install. Cloud-to-cloud integration via the InformaCast API. No servers, gateways, or hardware on site.

1

Connect

Link Genea and InformaCast through the InformaCast API. No on-site hardware.

2

Configure

Choose which Genea events initiate notifications, and which InformaCast alerts activate Emergency Plans.

3

Respond

When an event occurs, detection, notification, and lockdown happen as one automated workflow.
