

# Genea Security + BOSCH Intrusion System Integration

## Real-time alarm management, connected security.

Managing alarms and access control through separate systems creates operational inefficiencies and delayed response. Teams need complete oversight in real-time with connected systems. With a Genea Security and BOSCH Intrusion System integration teams can monitor, manage, and respond to security events faster and more efficiently – from a single platform.

## Feature Highlights

Arm, disarm, and monitor BOSCH Intrusion Alarm panels directly from the Genea dashboard

Track intrusion events with real-time notifications and access to alarm details to rule out false alarms or take immediate action

Manage user permissions for both access control and intrusion systems from a unified interface

Maintain audit trails with centralized tracking of intrusion events and access logs
