# Safeguard the Workplace During and Beyond the COVID-19 Pandemic

Introducing Safe Workplace

ACCESS CONTROL.
OCCCUPANCY MANAGEMENT.
CONTACT TRACING.
A SAFER WORKPLACE.

COVID-19 has changed - and will continue to impact - the way organizations do business. Social distancing protocols, evolving guidelines on the number of people who can gather indoors, and remote working have rewritten the script on safeguarding the workplace and the people who work there. But just as Genea's Access Control solution revolutionized employee credentialing and visitor management, so too have we reimagined returning to work with a new set of features: **Safe Workplace.**

Layered on top of Genea's Access Control platform, Safe Workplace allows users to leverage our cloud-based technology to track, manage, and enforce capacity limits for any space, including contact tracing, compliance and alerting.
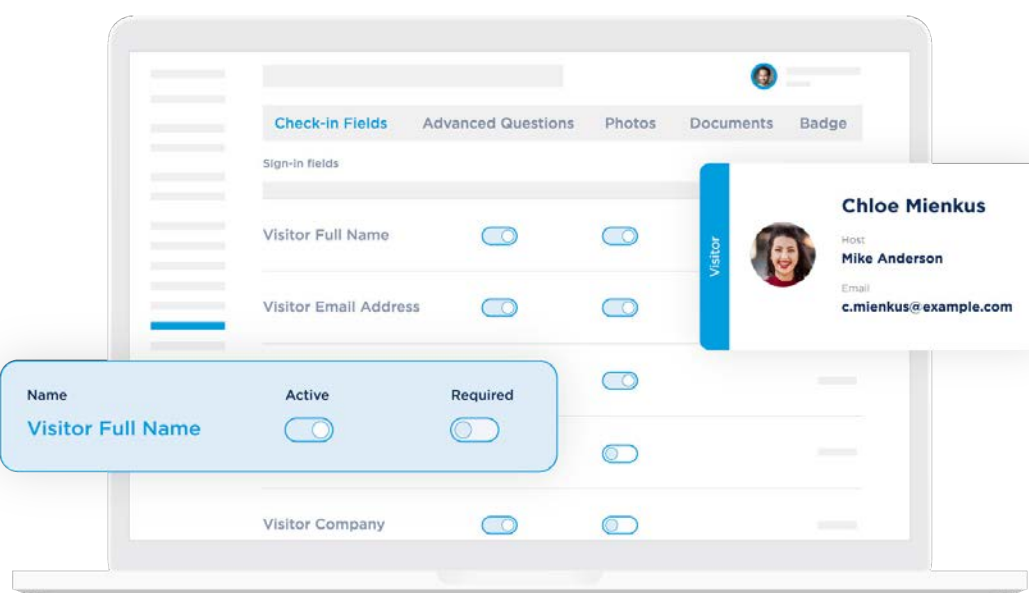

Looking for an all-in-one access control solution?

Contact us to learn how Genea can automate your office access control and visitor management systems in one easy-to-use portal.

Get People Back to the Office with Safe Workplace

EMPLOYEE CHECK IN/CHECK OUT WITH A SEAMLESS AND INTUITIVE MOBILE EXPERIENCE

Key fobs get lost. Cards can be easily cloned or shared. Doors can be wedged open. Some staff may travel to multiple office locations with full access; others only to a single area within one location. But no matter the scenario, Genea's standard acccess control dashboard allows administrators to easily define hierarchies of access by employee, location, floor, and workflow.
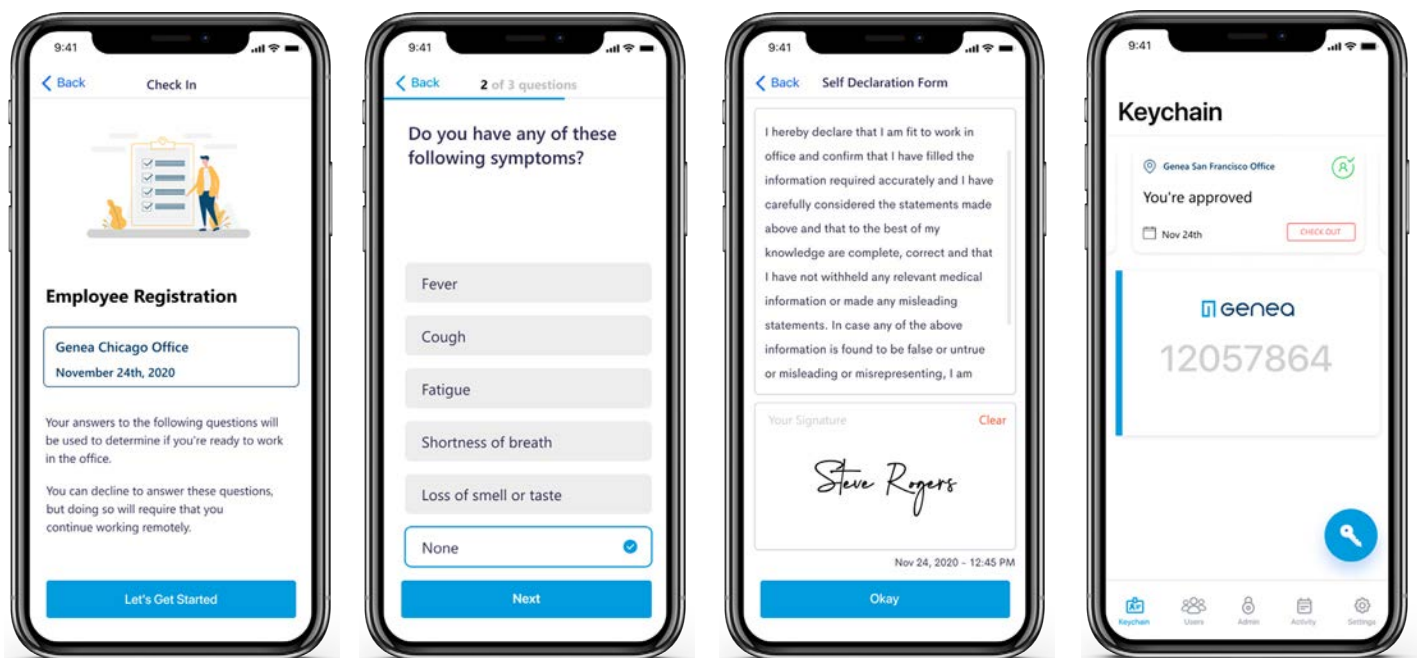

They can gain real-time intel on who badges in and out of a workplace; view integrated video feeds for any security breach - and define who needs to know about it; de-activate access the moment an employment relationship ends; and view activity logs in seconds. Need to grant after-hours access, hold open a door, or run an emergency lockdown? No problem - all can be done remotely. By using smartphones to control access, the incidence of shared, lost or duplicated access cards is reduced or eliminated entirely.

CAPACITY SETTINGS AND ALERTS ENSURES ONLY SYMPTOMLESS, APPROVED INDIVIDUALS ARE GRANTED ACCESS

- Limit the number of people coming to your space on a given day
- Enforce social distancing with occupancy thresholds and alerts to help you monitor activity levels inside your building or workplace
- Integrate even further with touchless visitor management

Safety and security rely on compliance, adherence, and consistency. Safe Workplace optimizes all - in an environment driven by COVID protocols - by automating access to a workplace through fully customizable qualifications. Administrators, for example, can set capacity limits by reducing workplace capacity from 100 to 20 with a single keystroke. Employees can reserve a space in the office, answering a series of health questions to determine their confirmation or denial of access, before they ever leave home. Onsite thermal sensors can check temperatures, communicate with online access panels, and deny access if a high temperature is recorded.

Safe Workplace was designed to account for mistakes or exceptions: If an employee accidentally selects 'yes' instead of 'no' to a health question, they can request that their questionnaire be reviewed and reset. If an employee can't gain access because office capacity has been reached, they can contact HR (or the admin) for an override if it's deemed essential.
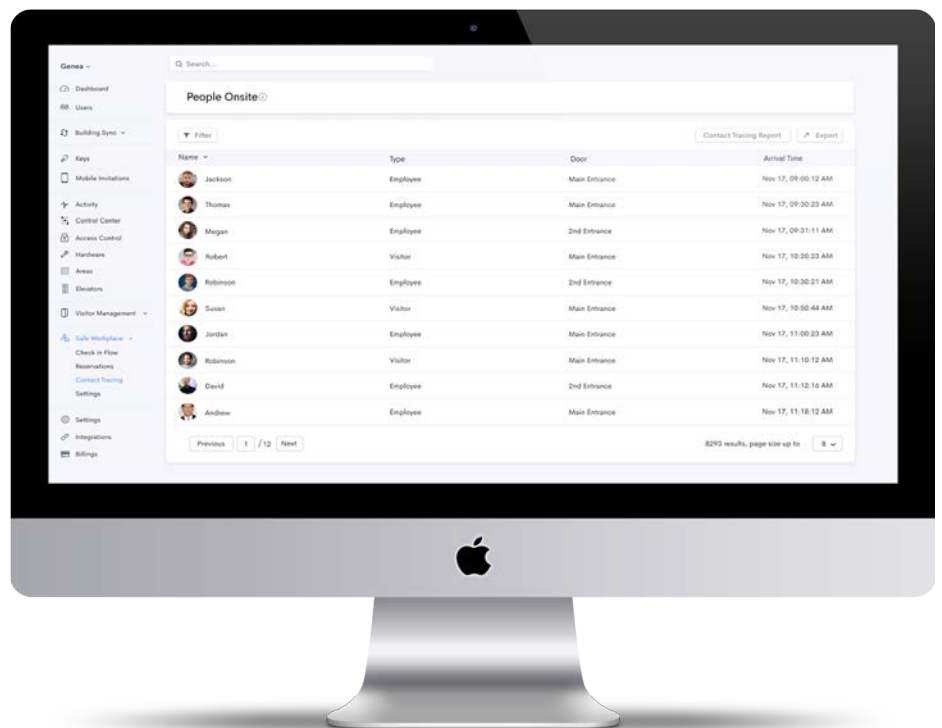

Visitors to a workplace can also be pre-registered online, asked the same set (or a new set) of health screening questions, and provided temporary access via a QR code - ensuring touchless visitor management from start to finish.

CONTACT TRACING AND SUPPORT

Give administrators and executives across departments insights on occupancy and capacity management, and facilitate contact tracing with all activity logs.

At any point, Safe Workplace users can generate reports of exactly who was granted and denied access, who checked in, who was co-located in a workplace at any given time, and when individuals left. The result of these insights is critical for contact tracing in the event of a positive COVID case; administrators can easily determine potential exposure and launch targeted contact tracing efforts immediately.

Genea and Safe Workplace adhere to the highest privacy standards and GDPR, CCPA, and SOC2 compliance regulations.

Genea's next-generation platform puts property teams and tenant's needs above all by giving them the control they want and deserve with three flagship product offerings:

ACCESS CONTROL

Genea's all-in-one cloud-based access control and visitor management platform comes with a self-service tenant portal to delegate and automate user credentialing. Administrators can assign access keys in any form, from physical key fobs and cards to mobile keys that let employees open doors, gates, elevators, and more with their phones. And, by empowering tenants to add and remove users, Genea's platform saves property teams hundreds of hours per year, reducing the time and cost associated with access control.

OVERTIME HVAC

Our cloud-based OTHVAC software allows tenants to submit after hours HVAC and lighting requests from their smartphones, fulfills the request through the existing BMS, and handles tenant billing - all using existing hardware and energy management systems.

SUBMETER BILLING

Genea's cloud-based submeter billing software works with existing networked and non-networked meters to streamline the submeter reading and billing process. Ditch the manual clipboards and spreadsheets and take the guesswork out of submetering once and for all.

How We're Different:

Genea is the first access control management software of its kind. It is built on a state-of-the-art open hardware platform, with an emphasis on security and scalability.

Our mission is to help customers like you by providing a cloud-based access control system that's intuitive, open, accountable, and responsive.

- Non-proprietary hardware, so no 'rip and replace' needed.
- Live 24/7 customer support.
- No middleman, ever: We sell and service directly to our customers. For any problems or questions that arise, we will troubleshoot - not an outsourced third-party.
- Only access control platform designed specifically with multi-tenant offices in mind.
